

## **Cursor, Hugging Face, LM Studio , Ollama**

Cursor is artificial Intelligence IDE Integrated Development Environment which generates code and even complete softwares when given a text line as input.

It works for all programming languages like python, java, php, c, c++, html etc.

It has Visual Studio Code like interface and can inherit visual studio code extensions.

It generates source code files based on text given in [Agent window](#). For example if you will write

Generate a contact management system project in python flask using mysql in the agent window it will generate the source code files for the project and then you can run the project using python interpreter.

It can be downloaded from <https://cursor.com/download>

It is available as a website or as a standalone desktop software.

It has GitHub and GitLab support.

---

Hugging Face is a github like platform which has more then 2 millions open source large language models like ollama, deepseek etc.

[www.huggingface.co](http://www.huggingface.co)

---

LM Studio is an artificial intelligence software to run open source ai models locally on your computer.

You can download LM Studio at

[Download LM Studio - Mac, Linux, Windows](#)

---

Ollama is a open source AI Model which can run locally on a computer.

Ollama also has a light weight AI Model Tinyllama.

Download Ollama at <https://ollama.com>
